

Chisel paste 4759: Hazard labelling no longer required!

Your customers want products that are not only high-performance, but also easy to use. One of the decisive factors is hazard labelling: The fewer danger symbols marked on a product, the safer and easier it is for the user to handle. That is precisely what we have achieved with our Chisel paste 4759: It is no longer necessary to label the product as a hazardous substance — even with the same product formulation!

Why is hazard labelling no longer required?

Previously, it was necessary to label Chisel paste 4759 as a water pollutant due to the copper powder it contained. The basis for this was the classification of the individual components according to their toxicological properties. When considered as a raw material in isolation, the copper powder in particular is a water pollutant.

New toxicological studies—carried out by Institut Fresenius—have now confirmed that, once part of the finished product, the copper powder is no longer as hazardous as in its original form, which would require labelling.

What does this mean for you?

You will now receive our Chisel paste 4759 without hazard symbols and hazard statements. As a result of the revaluation, the water hazard class will be reduced from 3 to 1; in addition to this, the product will no longer be classified as a hazardous material. This relaxes the requirements for handling the product and opens up new application possibilities for your customers.

We have not made any changes to the product itself, or its composition. You can continue to provide your customers with Chisel paste 4759, with the confidence that it is still a special paste of first-class quality.

A wide variety of applications

Our high-performance products reliably support your customers in a wide variety of applications and application fields from different sectors, such as construction and civil engineering, agriculture and forestry, bearing technology, mechanical engineering and the steel industry. Chisel paste 4759 can be used to lubricate components such as the plug tools and wear bushings of hydraulic and pneumatic hammers.

We are there for you

Do you have any questions regarding the lifting of labelling requirements for Chisel paste 4759? If so, please do not hesitate to contact us. Your Siebert expert Hans van Gerwen will be happy to help you.
